INTRODUCTION

TAMAYA NC-2 ASTRO-NAVIGATION CALCULATOR can perform navigational calculations quickly and economically. It eliminates painstaking tabulation from conventional tables, and is not only faster but more accurate. Included in the navigation programs are Dead Reckoning, Course and Distance by Mercator and Mid-latitude Sailing, Course and Distance by Great Circle Sailing, Altitude and Azimuth of a body for Celestial Navigation, Most Probable Position, Time and Arc calculation, and TIME \Rightarrow ARC conversion. In addition, NC-2 features with four scientific function keys and the normal arithmetic calculation capabilities.

EXTERNAL FEATURES

EXPLANATION OF MODE SELECTORS AND KEYS

NAVIGATION MODE KEYS

- LOP** mode key calculates the Altitude and Azimuth of the sun, moon, planets and the stars to obtain a Line of Position in celestial navigation.
- DR-MP** mode key calculates the Dead Reckoning and Most Probable Position.
- CD** mode key calculates the Course and Distance by Mercator Sailing and Mid-latitude Sailing.
- GC** mode key calculates the Initial Course and Distance by Great-circle Sailing.
- TIME** mode key makes the hours, minutes, seconds calculation.
- ARC** mode key makes the degree, minutes and 1/10 minutes calculation.
- ARC** mode key converts the hours, minutes and seconds into degrees, minutes and 1/10 minutes.

- TIME** mode key converts the degrees, minutes and 1/10 minutes into hours, minutes and seconds.

FUNCTIONS KEYS

- arc:** Key for converting sin, cos and tan to \sin^{-1} , \cos^{-1} and \tan^{-1} functions.
- sin cos tan:** Trigonometric function keys
- ln:** Natural logarithmic function key
- $\sqrt{\quad}$:** Square root calculation key

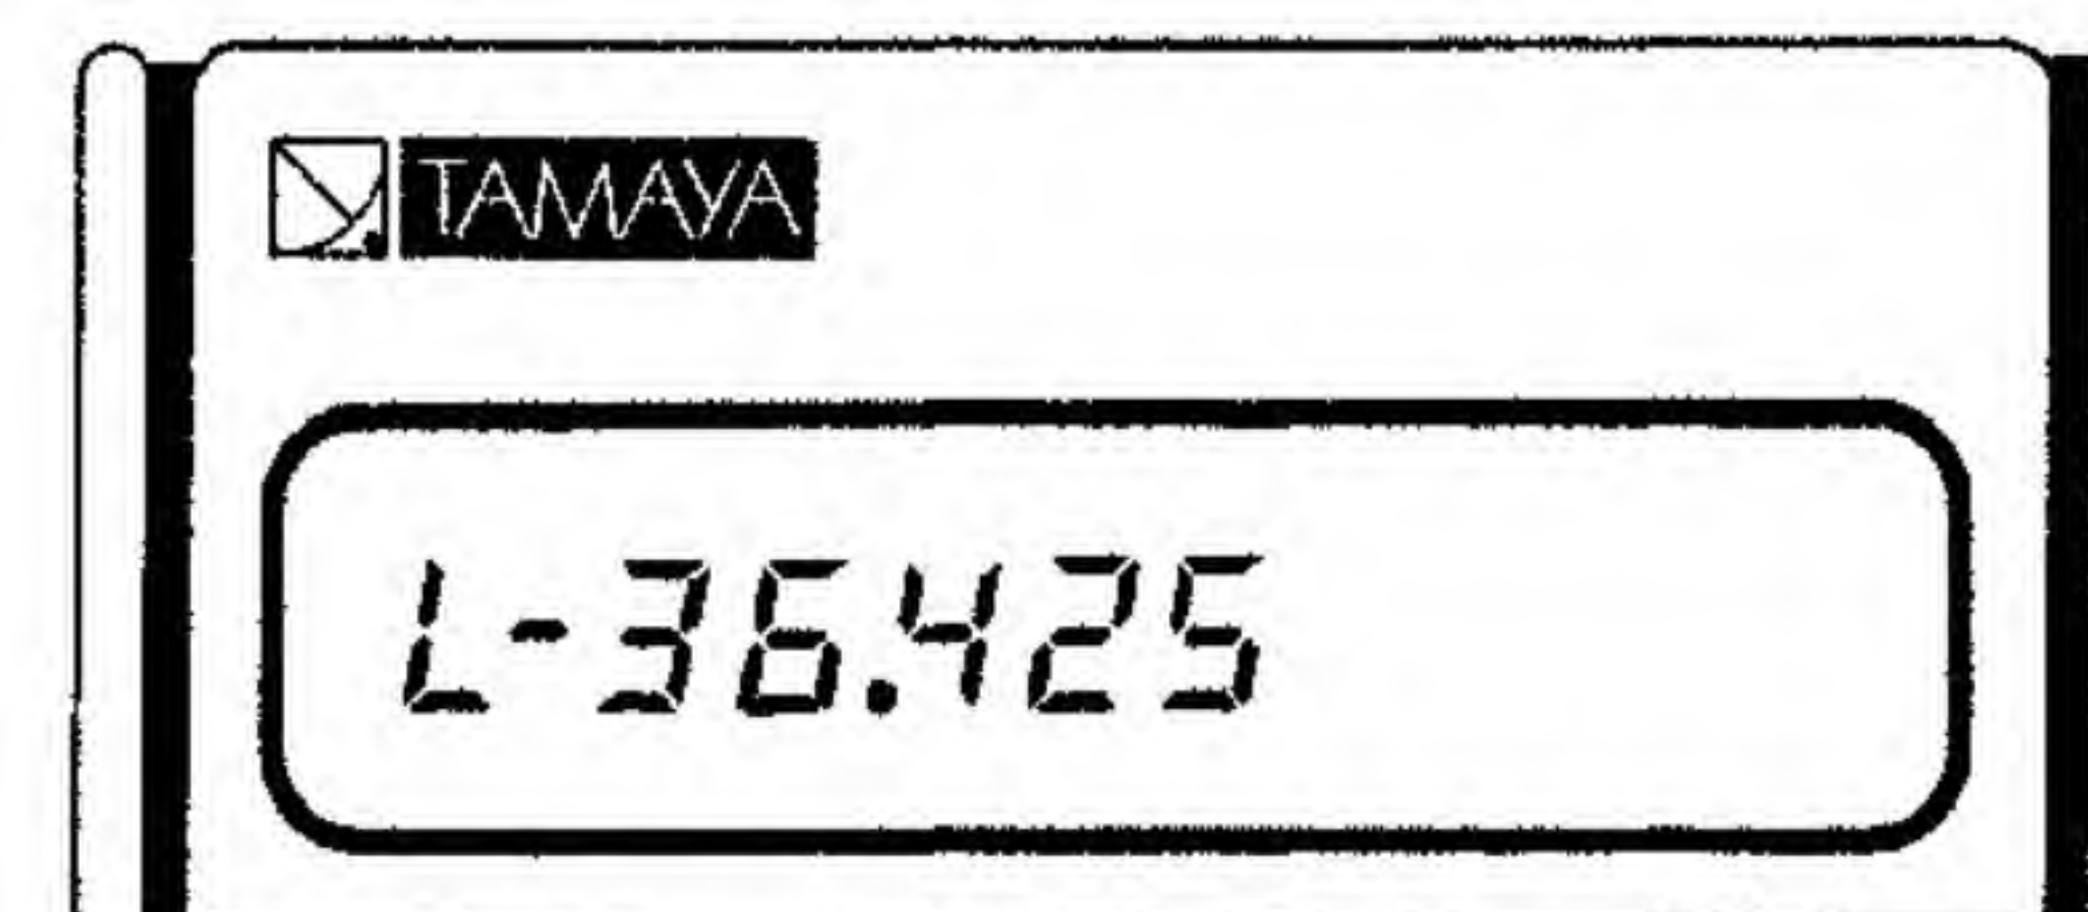

OTHER KEYS

- C** Clears all the calculation registers, error etc. Resumes the beginning of the program in CD, DR-MP, LOP, GC, TIME, ARC.
- CE** Clears only displayed register.
- 0 9** Numeral keys to enter a number.
- .** Designates the decimal point of a set number.

- ☐ ☐ ☐ ☐ ☐ Sets the order of each function.
☐ ☐ ☐ ☐ ☐ Completes the addition, subtraction, multiplication, division function.
☐ ☐ ☐ ☐ ☐ Inverses the sign of a displayed number.
☐ ☐ ☐ ☐ ☐ Designates North in latitude and East in longitude.
☐ ☐ ☐ ☐ ☐ Designates South in latitude and West in longitude.
☐ ☐ ☐ ☐ ☐ Enters a number, starts the programmed calculation and recalls the memory.
 off ☐ on
POWER SWITCH When the power switch is slid to "ON" position the calculator is powered, automatically cleared and ready for operation by normal calculation mode.
☐ ☐ ☐ ☐ ☐ Clears the navigation modes and sets the normal calculation mode.

EXPLANATION OF DIALOGUE SYMBOLS AND INDICATORS

Dialogue system makes the operation very easy by telling you at each step what data to feed in. The answers are also accompanied by the symbols which specify the meaning.

Ex. Latitude 36° 42'.5S

NC-2 ASTRO-NAVIGATION CALCULATOR

INPUT/OUTPUT DIALOGUE

LOP	DR,MP CD GC	TIME	ARC	MODE	MEANING
H					Local Hour Angle
d					declination
A					Calculated Altitude
=					Azimuth
L	L				Latitude
	//				longitude
	c				course (Azimuth)
	d				distance (Intercept)
		h			hour
			d		degree

- sign after *L* indicates South latitude
- sign after *//* indicates West longitude
- E : Overflow error symbol
- : minus symbol

NORMAL CALCULATION (N-MODE)

1 four rules of arithmetic calculation

Problem 1	Key	Display	Note
123 - 45.6 + 789 =	[N] 123 [-] 45.6 [+] 789 [=]	123. 77.4 866.4	123 - 45.6 answer
365 x (-1.15) ÷ 0.5 =	[N] 365 [x] 1.15 [+/-] [=]	365. -419.75 -839.5	365 x (-1.15) answer

To enter negative number, depress the [+/-] key after the number

2 constant calculation

Problem 2		Key	Display	Note
constant addition	$5 + 3 =$	$\boxed{N} \ 5 \boxed{+} \ 3 \boxed{=}$	8.	
	$10 + 3 =$	$\boxed{10} \boxed{=}$	13.	$10 + 3$
	$15 + 3 =$	$\boxed{15} \boxed{=}$	18.	$15 + 3$
constant subtraction	$5 - 3 =$	$\boxed{N} \ 5 \boxed{-} \ 3 \boxed{=}$	2.	
	$10 - 3 =$	$\boxed{10} \boxed{=}$	7.	$10 - 3$
	$15 - 3 =$	$\boxed{15} \boxed{=}$	12.	$15 - 3$
constant multiplication	$295 \times 8 =$	$\boxed{N} \ 295 \boxed{\times} \ 8 \boxed{=}$	2360.	
	$295 \times 6 =$	$\boxed{6} \boxed{=}$	1770.	295×6
	$295 \times (-12) =$	$\boxed{12} \boxed{-} \boxed{=}$	-3540.	$295 \times (-12)$
constant division (divisors will be constant)	$32 \div 2 =$	$\boxed{N} \ 32 \boxed{\div} \ 2 \boxed{=}$	16.	
	$24 \div 2 =$	$\boxed{24} \boxed{=}$	12.	$24 \div 2$
	$(-16) \div 2 =$	$\boxed{16} \boxed{-} \boxed{\div} \ 2 \boxed{=}$	-8.	$(-16) \div 2$

3 chain multiplication and division

Problem 3	Key	Display	Note
$5 \times 3 \div 9 =$	$\boxed{N} \ 5 \boxed{\times} \ 3 \boxed{\div} \ 9 \boxed{=}$	5.	
		15.	5×3
		1.666666666	answer

4 square and power calculation

Problem 4	Key	Display	Note
$((2^3)^2)^2 = 2^{12} =$	$\boxed{N} \ 2 \boxed{\times} \ 2 \boxed{=}$	4.	2^2
	$\boxed{4} \boxed{\times} \ 2 \boxed{=}$	8.	2^3
	$\boxed{8} \boxed{\times} \ 2 \boxed{=}$	64.	$(2^3)^2 = 2^6$
	$\boxed{64} \boxed{\times} \ 2 \boxed{=}$	4096.	$(2^6)^2 = 2^{12}$

5 reciprocal calculation

Problem 5	Key	Display	Note
$\frac{1}{5} =$	$\boxed{N} \ 5 \boxed{\div} \ 1 \boxed{=}$	5.	
		1.	
		0.2	$\frac{1}{5}$

6 mixed calculation

Problem 6	Key	Display	Note
$\left \frac{(5+12) \times 18 \div 3 - 16}{4} \right ^2 =$	\boxed{N} $5 \boxed{+}$ $12 \boxed{\times}$	17.	$5 + 2$
	$18 \boxed{\div}$ $3 \boxed{-}$	102.	$(5 + 12) \times 18 \div 3$
	$16 \boxed{\div}$ $4 \boxed{\times}$	21.5	$(5 + 12) \times 18 \div 3 - 16$
	$\boxed{=}$	462.25	$\frac{\quad}{4}$ answer

7 function calculation

a) trigonometric function

Problem 7	Key	Display	Note
$\sin 63^\circ =$	\boxed{N} $63 \boxed{\sin}$	0.891006524	answer
$\tan 23^\circ 45' .5 =$	$23.455 \boxed{\tan}$	0.440184145	answer

b) inverse trigonometric function

Problem 8	Key	Display	Note
$\cos^{-1} 0.5 =$	\boxed{N} $.5 \boxed{\arccos}$	60.000	answer $60^\circ 00' .0$
$\sin^{-1} 0.2 =$	$.2 \boxed{\arcsin}$	11.322	answer $11^\circ 32' .2$

The input/output of trigonometric and inverse trigonometric function calculations is given as follows.

11 \longrightarrow degree 32 \longrightarrow minute 2 \longrightarrow 1/10 minute

c) logarithmic function

Problem 9	Key	Display	Note
$\ln 7 =$	\boxed{N} $7 \boxed{\ln}$	1.945910148	answer

d) square root calculation

Problem 10	Key	Display	Note
$\sqrt{5 + \sqrt{3}} =$	\boxed{N} $5 \boxed{+}$	2.236067977	$\sqrt{5}$
	$3 \boxed{+}$	3.968118784	answer

e) mixed calculation

Problem 11	Key	Display	Note
$\sin 30^\circ + \sqrt{5} - \cos 25^\circ 45' .5 =$	\boxed{N} $30 \boxed{\sin}$	0.5	$\sin 30^\circ$
	$5 \boxed{+}$	2.236067977	$\sqrt{5}$
	$\boxed{+}$	2.736067977	$\sin 30^\circ + \sqrt{5}$
	$25.455 \boxed{\cos}$	0.900635042	$\cos 25^\circ 45' .5$
	$\boxed{=}$	1.835432935	answer

NAVIGATION CALCULATIONS

I. Dead reckoning and piloting

1. Dead Reckoning

DR Dead Reckoning mode calculates the latitude and longitude of the point of arrival.

Problem 1	Key	Display	Answer
Departure Point Lat. 32°30'.6N		L 0.	D.R. Lat. 30°34'.2N
Departure Point Long. 118°36'.2W	32.306	L 32.306	D.R. Long. 123°36'.0W
Course 245°30'		H 0.	
Distance 280.8 miles	118.362	H -118.362	
		c 0.	
	245.3	c 245.3	
		d 0.	
	280.8	d 280.8	
		L 30.342	
		H -123.360	
		REPEAT L and H	

2. Course and Distance

CD Course and Distance mode calculates the course and distance from the departure point to the arrival point.

Problem 2	Key	Display	Answer
Departure Point Lat. 35°22'.4N		L 0.	Course made good 203°32'.8
Departure Point Long. 125°08'.2W	35.224	L 35.224	distance 3477.1 miles
Arrival Point Lat. 17°45.2S		H 0.	
Arrival Point Long. 149°30'.0W	125.082	H -125.082	
		L 0.	
	17.452	L -17.452	
		H 0.	
	149.30	H -149.30	
		c 203.328	
		d 3477.1	
		REPEAT c and d	

Principle

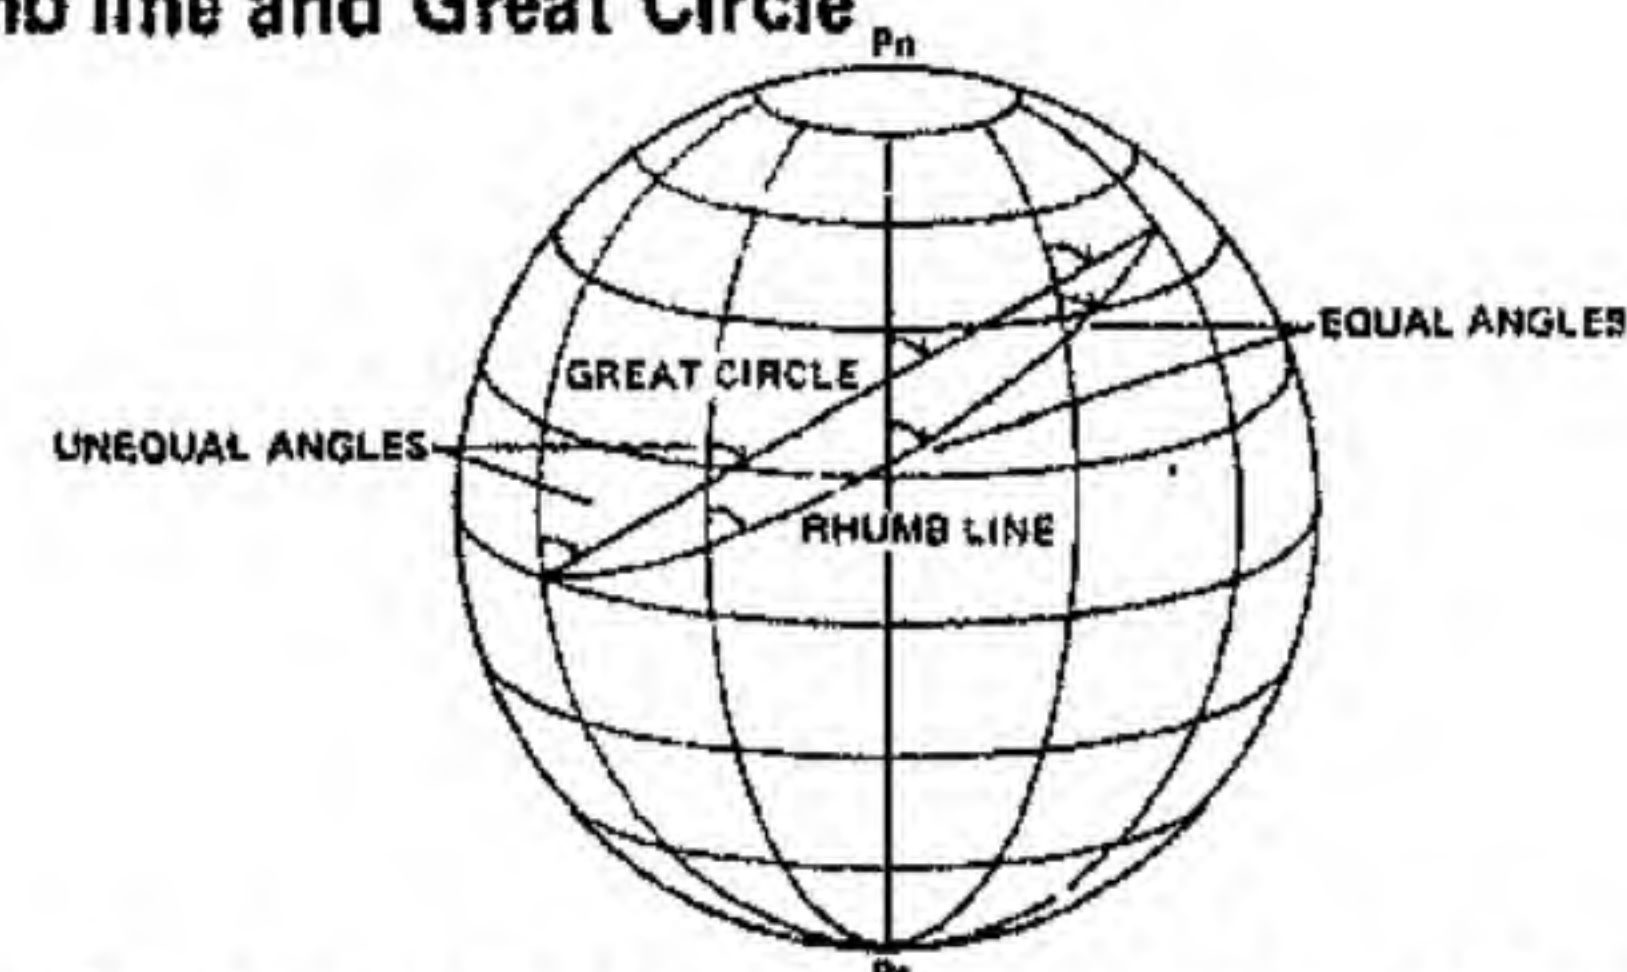

The principle of DR and CD calculation is Mercator Sailing. Accuracy is lost when the course approaches near 090° and 270° , so the program automatically switches to Mid-latitude Sailing, thus assuring accurate program for all circumstances. The course obtained by Mercator Sailing is a rhumbline. Appearing as a straight line on the Mercator chart it makes the same angle with all meridians it crosses. The main advantage of a rhumbline is that it maintains constant true direction. A ship following rhumbline between two points will not change a certain course. With the exception of very high latitudes (over $89^\circ 59' . 5$), NC-2 is virtually good for all course and distance calculation.

3. Great Circle Sailing

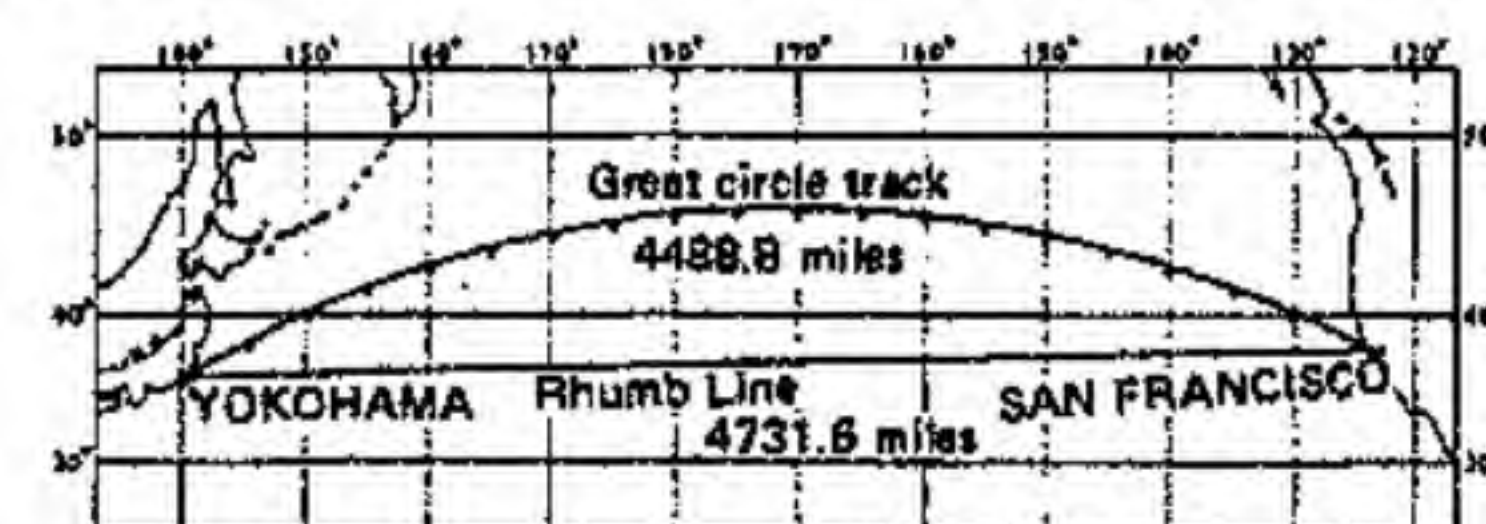

GC Great Circle Sailing mode calculates the great circle distance between two points and also the initial course from the departure point.

Problem 3	Key	Display	Answer
Departure Point Lat. $37^\circ 50' . 8N$	GC	L 0.	Great circle distance
Departure Point Long. $122^\circ 25' . 5W$ (San Francisco)	37.508 ☒ ☉	L 37.508 II 0.	4488.8 miles
Arrival Point Lat. $34^\circ 52' . 0N$	122.255 ☒ ☉	II-122.255 L 0.	Initial great circle course
Arrival Point Long. $139^\circ 42' . 0E$ (Yokohama)	34.520 ☒ ☉ 139.420 ☒ ☉ ☉ ☉ ☉ REPEAT	L 34.520 II 0. II 139.420 d 4488.8 c 302.379 d and c	302° 37' . 9

Comparison Rhumb line and Great Circle

Great Circle and Rhumb Line on the Earth's Surface

Great Circle and Rhumb Line on the Mercator Chart

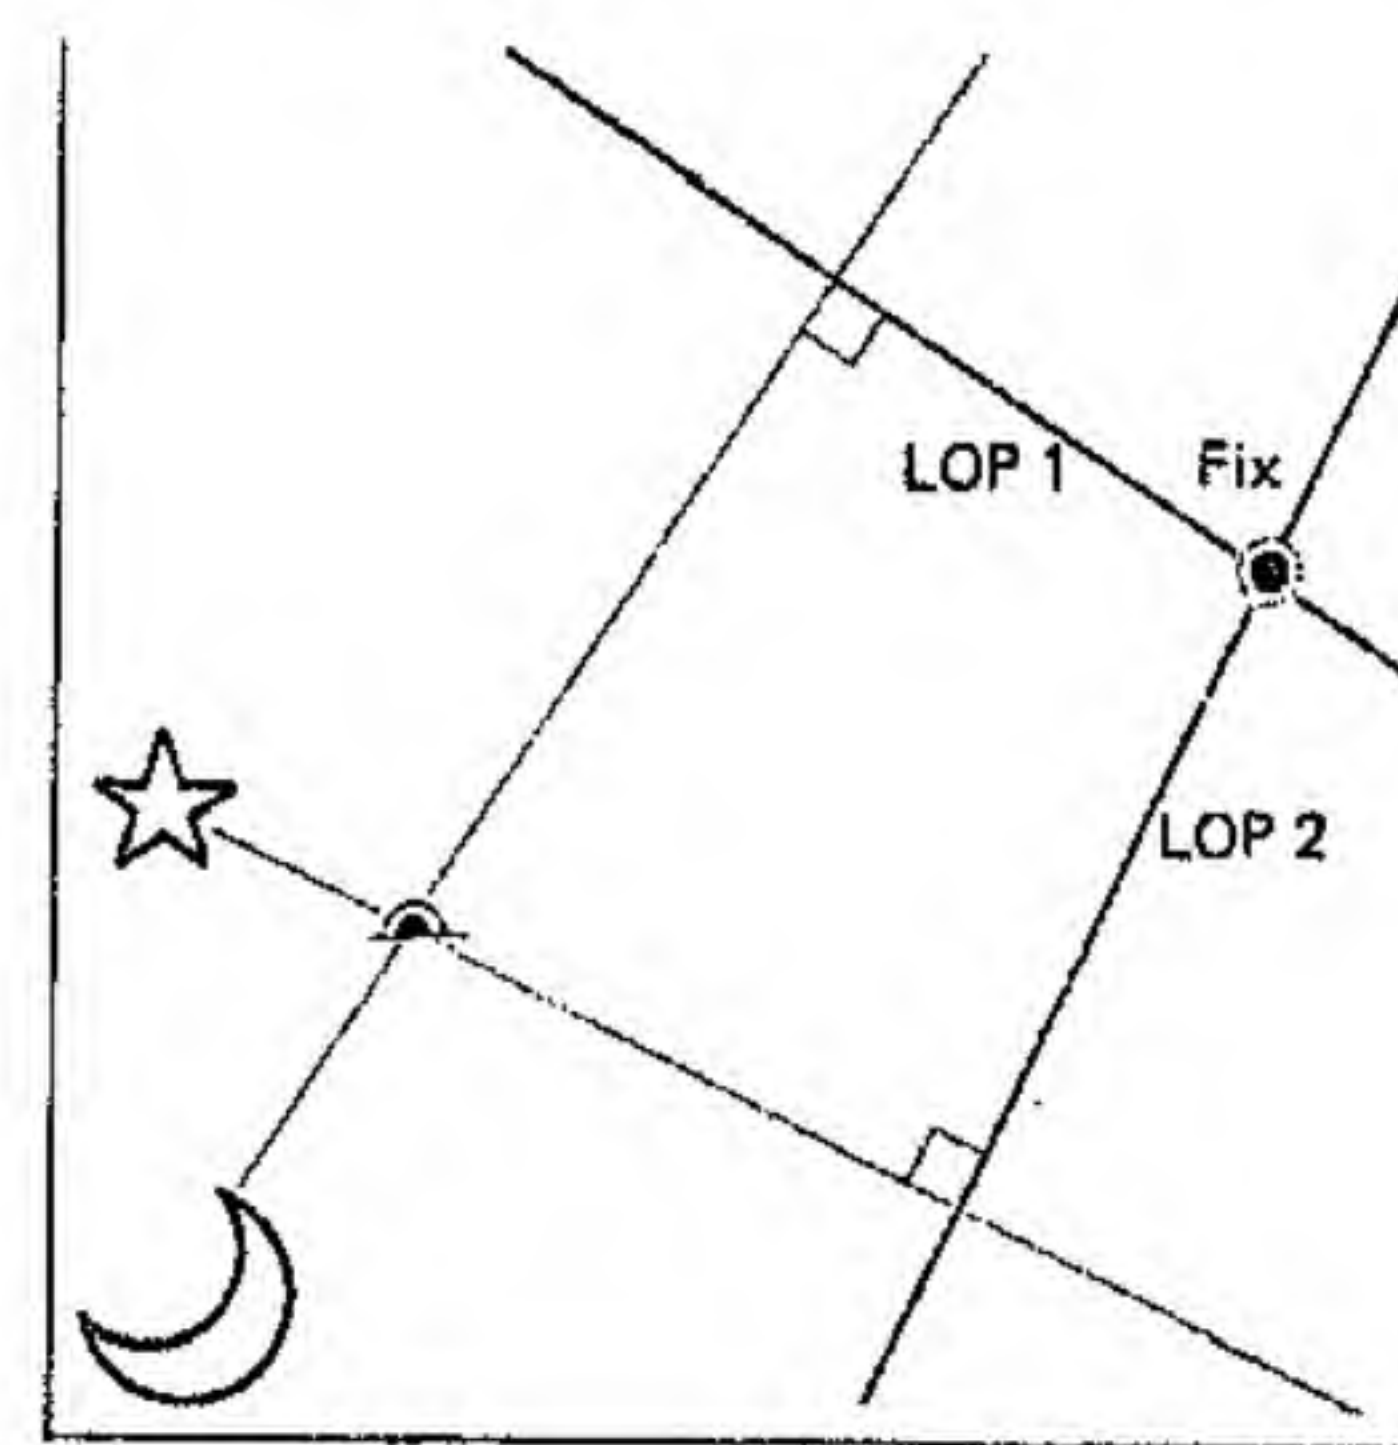

II. Celestial Navigation

1. Line of Position

LOP Line of Position mode calculates the altitude and azimuth of a celestial body. The NC-2 makes calculation extremely simple. Only three factors are needed; local hour angle, declination, and latitude.

Problem	Key	Display	Answer
Local Hour Angle of the sun 345° 23'.9	LOP 345.239	H 0. H 345.239	Calculated Altitude of the sun (Hc) 40° 29'.3
Declination of the sun 17° 10'.1S	☉ 17.101 ☉	d 0. d -17.101	Azimuth of the sun (Zn) 161° 32'.2
DR Latitude of the ship 30° 18'.3N	☉ 30.183 ☉	L 0. L 30.183	from North easterly
	☉	A 40.293	
	☉	Z 161.322	
	☉ REPEAT A and Z		

In the theory of celestial navigation a ship's position can be determined only after at least two LOP's are obtained. The intersection of the two or more LOP's called "fix" is the ship's position.

How to Use Nautical Almanac

In order to obtain a Line of Position you need a sextant, watch and the Nautical Almanac (WASHINGTON : United States Naval Observatory or LONDON : Her Majesty's Stationary Office) besides TAMAYA NC-2 ASTRO-NAVIGATION CALCULATOR.

Note (1) Sextant Altitude Corrections. (See the following Tables in the Nautical Almanac) A_2 and A_3 Altitude correction Tables for Sun, Stars and Planets (The first yellow pages) Altitude Correction Tables – Moon (The last yellow pages) A_4 Altitude Correction Tables – Additional Corrections.

The Nautical Almanac gives a clear explanation of how to use these altitude correction tables with examples on page 259 (1976 version).

(2) GHA (Greenwich Hour Angle) and (3) DECLINATION These data to be fed into NC-2 are found in the Nautical Almanac. Similarly, on page 256 The Nautical Almanac illustrates the examples for obtaining GHA and DEC. of the Sun, Moon, Planets and Stars.

LINE OF POSITION BY TAMAYA NC-2 ASTRO-NAVIGATION CALCULATOR

Example : The Dead Reckoning Position of a vessel is $30^{\circ}22'.8N$, $69^{\circ}35'.5W$ at GMT 15h 23m 46s on May 5th, 1976. Compute the Altitude and Azimuth of the Sun. The Hs is $68^{\circ}23'.5$. What is the altitude intercept?

Date & Time	DR. LAT.	DR. LONG
MAY 5, 1976 WWV 15h 23m	$30^{\circ}22'.8N$	$69^{\circ}35'.5W$

SEXTANT

NC-2	Body	
ARC	Hs (Sextant Altitude)	$68^{\circ}23'.5$
	Corrections (1)	+ 12'.5
	Ho (Observed Altitude)	$68^{\circ}36.0$

TIME

TIME	GMT (Watch)	
	15h 23m 46s	
	Correction	- 2
	GMT	15 23 46

(1) (2) (3) See page 23

LOCAL HOUR ANGLE (From Nautical Almanac) (2)

NC-2	GHA hours	
	45h 50'.4	
	GHA min. sec.	5' 56.5
	V correction (for Moon & Planets)	
	SHA (for Stars)	
ARC	Total GHA	$51^{\circ}46'.9$
	DR. LONG.	$69^{\circ}35'.5W$
	LHA = (GHA \pm DR. LONG.)	$-17^{\circ}48.6$
	Application of $\pm 360^{\circ}$ not requisite when LHA $< 0^{\circ}$ or LHA $> 360^{\circ}$.	

DECLINATION (From Nautical Almanac) (3)

LOP	DEC hours	
	16h 24'.3N	
	"d" correction Omit for Stars	$d = 0.7 + .3$
	Total DEC.	$16^{\circ}24'.6N$

DR. LAT.

TAMAYA NC-2

CALCULATED ALTITUDE

R	$68^{\circ}33'.2$	(Hc)
---	-------------------	------

AZIMUTH

E	$126^{\circ}38'.0$	(Zn)
---	--------------------	------

Always from North easterly

LINE OF POSITION

DR. LAT.	$30^{\circ}22'.8N$
DR. LONG.	$69^{\circ}35'.5W$
Zn	$126^{\circ}38'.0$
I = (Ho - Hc)	2.8 towards

Hc > Ho LOP is away from body.

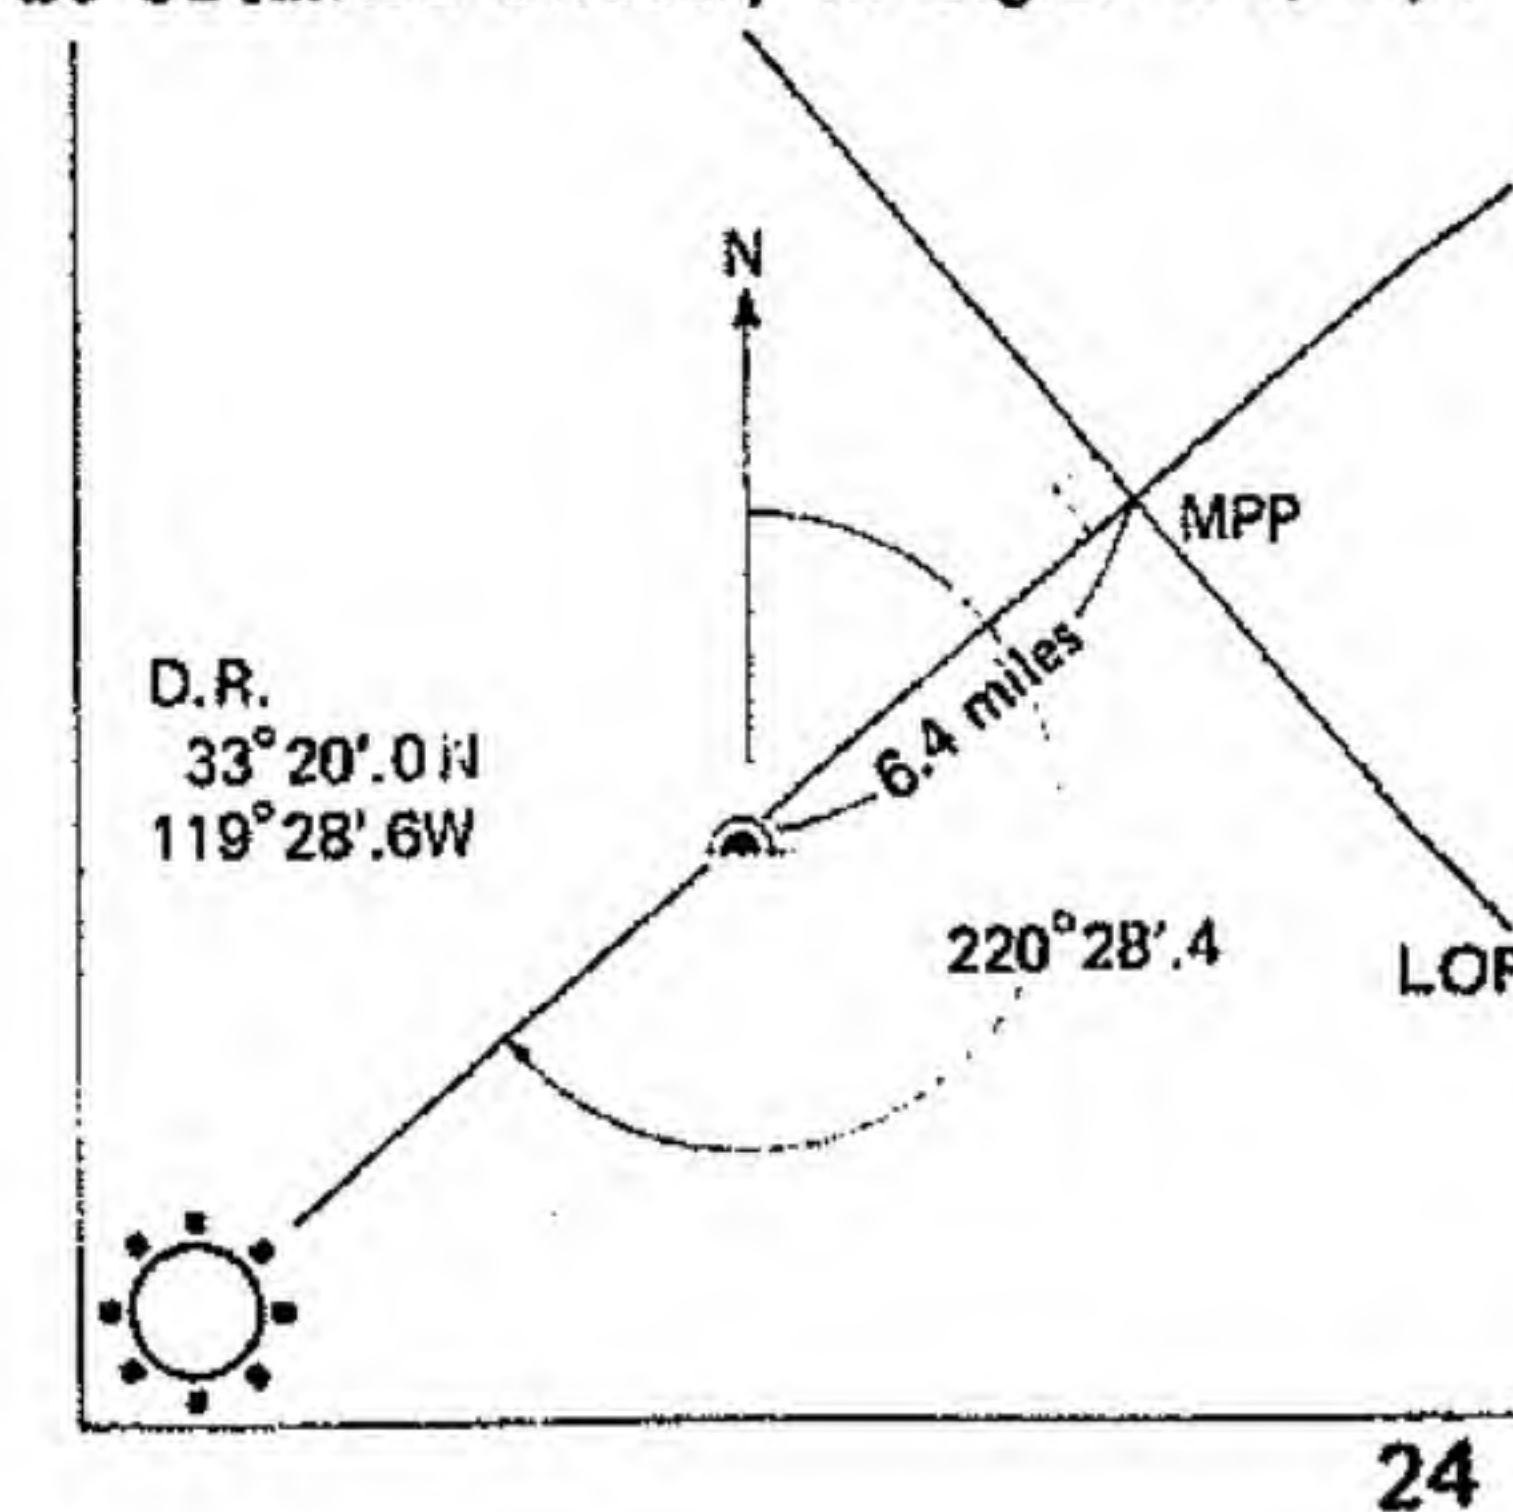

Ho > Hc LOP is towards body

Some Hints for Quicker Operation

1. Use ARC mode for the sextant altitude correction, LHA and DEC calculations. It saves a lot of pencil and paper work.
2. At the end of LHA column you may change the mode into LOP, leaving the displayed LHA, $-17^{\circ}48'6''$ in the example. Then touch start key to proceed to the declination column. You may also add or subtract "d" correction in the LOP mode ($-17.486 \text{ [LOP]} \text{ [C]} 16.243 \text{ [N/E]} + 0.003 \text{ [=] [C]} 30.228 \text{ [N/E]} \text{ [C]}$)
3. Do not forget to make the decimal point when entering the figures in TIME or ARC mode. For instance 35 minutes 20 seconds must be keyed as .3520. Similarly $1'.9$ in arc must be keyed as .019.
4. If you find it easier to do so, you may also touch the decimal point key between minutes and seconds in TIME mode and minutes and 1/10 minutes in ARC mode. It makes no difference.
5. When you have learned the operation thoroughly you may omit entirely the use of N/E key. It is not connected to the circuit but left on the panel to make the step by step learning easy.

2. Most Probable Position

MP Most Probable Position mode calculates the intersection of LOP and intercept. Instead of plotting a line of position, a calculated most probable position can be obtained directly in digital display.

Problem 2	Key	Display	Answer
DR Lat 33°20'.0N		L 0.	Most probable position 33°25'.9N 119°25'.7 W
DR Long 119°28'.6W	33.200	L 33.200	
Azimuth of the sun (Z)			
202°28'.4	119.286	II-119.286	
Intercept :		c 0.	
6.4 miles away	202.284	c 202.284	
		d 0.	
	6.4	d -6.4 (Change sign when Intercept is "away". Do not change if it is "towards".)	
		L 33.259	
		II-119.257	
	Repeats	L and II	

Most probable position helps improve the reliability of DR position but should be differentiated from the "fix" obtained by two or more LOP's.

III. Other convenient calculations in navigation

1. ARC TIME Conversion

mode converts the hours, minutes, and seconds into degrees, minutes and 1/10 minutes.

mode converts the degrees, minutes, and 1/10 minute, into hours, minutes and seconds

Problem 1(b)	Key	Display
Arc 35°41'.8		d 0.
	35.418	d 35.418
2h22m47s		h 2.2247

Problem 1(a)	Key	Display
Time 3h 51m 03s		h 0.
	3.5103	h 3.5103
57°45'.7		d 57.457

2. TIME and ARC calculations

Time mode makes the hours, minutes, seconds calculation, ARC mode makes the degree, minutes, and 1/10 minutes calculation. TAMAYA NC-2 follows the customary rule of expressing seconds in terms of 1/10 of a minute in arc mode.

Problem 2(a)	Key	Display	Problem 2(b)	Key	Display
(14h59m23s	TIME	h 0.	(38°29'.8	ARC	d 0.
+15h01m59s)	14.5923	h 14.5923	+39°48'.8)	38.298	d 38.298
÷2 = 15h00m41s	+	h 14.5923	÷2 = 39°09'.3	+	d 38.298
	15.0159	h 15.0159		39.488	d 39.488
	÷	h 30.0122		÷	d 78.186
	2	h 2		2	d 2
	=	h 15.0041		=	d 39.093

All $+ - \times \div$ calculations can be performed by TIME and ARC mode.

CORRECTION OF MISTAKES

When false number is entered during calculation, depress the **CE** Key, Then, only the false number is cleared.

Key	Display	Note
123 + 455	455.	False number 455
CE	0.	is cleared
456 =	579.	Answer 123 + 456

If the arithmetic calculation keys (**×** **÷** **+** **-**) are operated by mistake, depress the correct key successively. Then, correct instruction replaces the preceding instruction.

Key	Display	Note
7 ×	7.	False instruction
÷	7.	correction of the instruction
8 =	0.875	Answer 7 ÷ 8

OVERFLOW ERROR

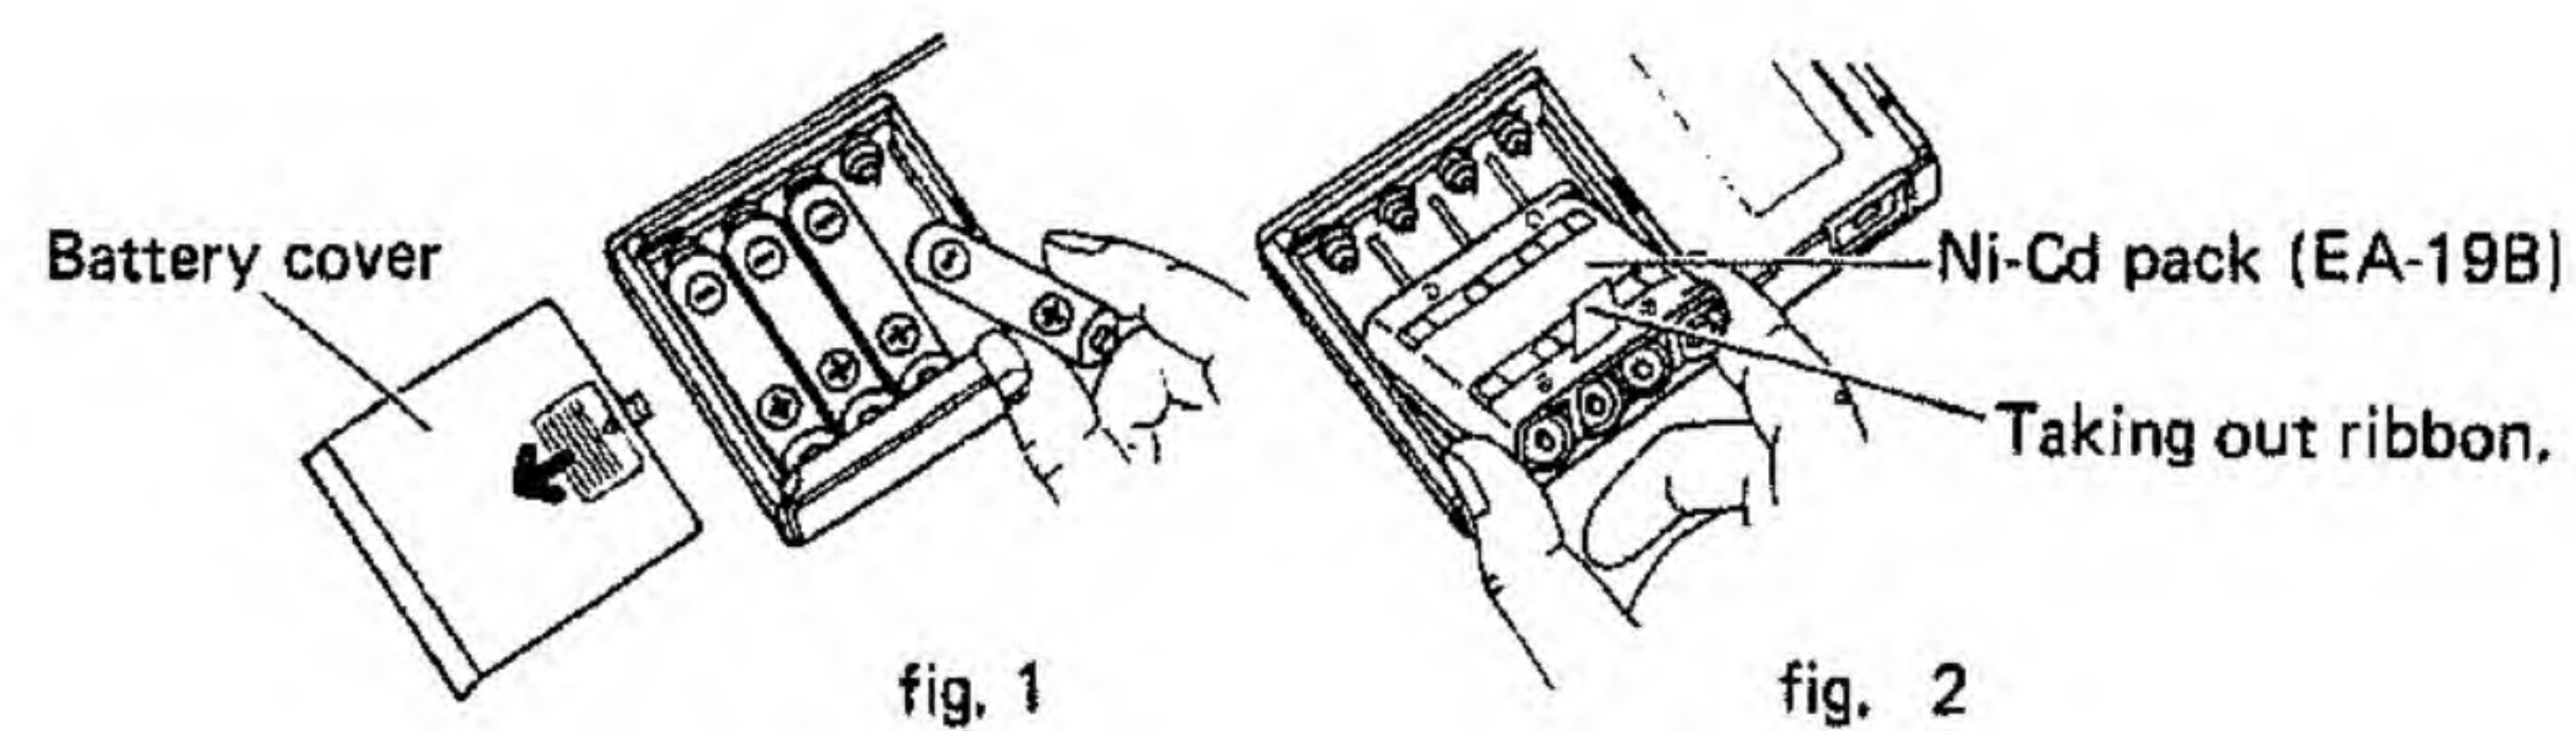

An overflow error will occur in the following cases. When an overflow error is detected, all keys electronically are inter-locked except the \boxed{C} and \boxed{CE} key. overflow error is cleared by pressing the \boxed{C} or \boxed{CE} key.

1. When the integer portion of sum, difference, product or quotient exceeds 10 digits.
2. When a number is divided by zero.
3. When x value in the function calculation is in the following cases :
 \sqrt{x} $x < 0$ $\tan x$ $x = 90^\circ \pm n - 180^\circ (n = 0, 1, 2, \dots)$
 $\ln x$ $x \leq 0$ $\sin^{-1} x, \cos^{-1} x$ $|x| > 1$
4. In TIME mode; when an entered number, sum, difference, product or quotient exceeds 8 digits.
5. In ARC \rightleftharpoons TIME conversion mode ; when the integer portion of TIME exceeds 8 digits.
6. In LOP, DR-MP, CD, GC mode; when any one of the conditions stated in above 1,2,3 occurs.

(Note) In all the cases 1 to 6, the memory retains the contents before the overflow error is detected

HOW TO INSERT AND REPLACE BATTERIES

1. Turn off the power switch and slightly push the battery compartment cover in the arrow mark direction to remove it (fig. 1)
2. Insert four type SUM-3E batteries or Ni-Cd battery pack (EA-19B) (fig. 1, fig. 2). At this time set them to the spring side ("—" side) first while taking care of their polarities.
3. Slide the battery compartment cover into the main body after setting the pawls on the right and left sides of the former to the grooves in the latter.
4. When display becomes fading, it means that batteries are exhausted. Therefore, replace the batteries with new ones (in the case of Ni- Cd battery recharge it).
 - When replacing the batteries with new ones, replace all of four batteries at the same time.
 - To insert or pull the plug of AC adaptor into or from calculator, be sure to turn off the power switch of calculator.

SPECIFICATIONS

Power Source :	AC: with Adaptor/Charger Sharp EA-14a (Option) for 100, 117, 220, 240V 50/60 Hz DC: 6V 1.5 V x 4 Sharp SUM 3E (Standard) 10 hours Rechargeable Ni-Cd battery EA-19B (Option) (6.5 hours – charge 15 hours)
Display :	Fluorescent (Itron) display with zero suppression
Capacity :	Input/output : 10 digits (max.) Dialogue symbol and minus sign : 2 digits
Decimal Point :	Fully floating decimal point
Sign & dialogue symbols :	Minus sign, error, Local Hour Angle, declination, course, distance, latitude, longitude, hour, degree, Calculated Altitude, Azimuth
Calculations :	four arithmetic calculations, constant calculations, chain multiplication & division, square and power calculation, reciprocal calculation, mixed calculation
Scientific functions :	$\sin x$, $\cos x$, $\tan x$, $\sin^{-1} x$, $\cos^{-1} x$, $\tan^{-1} x$, $\ln x$, $\sqrt{\quad}$

**Programmed
Navigation

Weight :

250 grams (0.55 lbs.)

CAUTION

It is highly recommended that conventional tables and tools be taken on cruises along with the NC-2 Calculator as insurance against Calculator failure or battery discharge.

Keep NC-2 away from water moisture or extreme low temperature and heat. Use the storage case as protection against vibration and shock.
